

Kavindu Gayantha

Data Science Undergraduate

kavindugayantha178@gmail.com | +94-777469788 | Negombo, Sri Lanka | [LinkedIn Profile](#) | [Github Profile](#)

PROFILE SUMMARY

Third-year Data Science undergraduate at the Sri Lanka Institute of Information Technology (SLIIT) with a strong interest in Data Analytics, Machine Learning, Artificial Intelligence, and Full-Stack Development. Skilled in Python, Java, JavaScript, SQL, React.js, Node.js, Spring Boot, and MongoDB, with hands-on experience in developing machine learning solutions and full-stack web and mobile applications. Passionate about leveraging data-driven insights and technology to solve real-world problems and seeking an internship opportunity to further develop technical expertise while contributing to innovative software and AI-driven solutions.

EDUCATION

Bachelor of Science in Information Technology (Specializing in Data Science)	(2024 - present)
Sri Lanka Institute of Information Technology (SLIIT)	
G.C.E. Advanced Level – Bandaranayake College, Gampaha	2023(2024)
Physical Science Stream 1C's & 2S	
G.C.E. Ordinary Level – Bandaranayake College, Gampaha	2020(2021)
9A's	

TECHNICAL SKILLS

- Programming:** Python, Java, JavaScript, C, SQL
- Web & Mobile Development:** HTML, CSS, React.js, React Native, Node.js, Express.js, Spring Boot
- Databases:** MongoDB, MySQL, Microsoft SQL Server
- AI/ML & Data Science:** Machine Learning, Pandas, NumPy, Scikit-learn, TensorFlow, Keras, Statistics, Data Cleaning, Classification, Clustering, Data Visualization
- Tools & Platforms:** Git, GitHub, VS Code, IntelliJ IDEA, Streamlit, Flask, Postman

SOFT SKILLS

- Problem Solving & Analytical Thinking
- Quick Learning & Adaptability
- Team Collaboration
- Research & Documentation
- Attention to Detail

PROJECTS

Intelligent Job Recommendation System | University Project

GitHub: <https://github.com/kavindugayantha04/intelligent-job-recommendation-system>

Designed and developed a full-stack AI-powered job recommendation system using React.js, Node.js, Express.js, MongoDB, and Python.

- Implemented a TF-IDF and cosine similarity-based recommendation engine for personalized job matching
- Developed recruiter and candidate modules for job posting and application management
- Integrated resume/CV upload and NLP-based skill extraction features
- Added skill gap analysis and course recommendation functionality
- Built a Flask-based AI microservice for real-time recommendation processing
- Used JWT authentication and role-based access control for security

Food Ordering Application | University Project

GitHub: <https://github.com/kavindugayantha04/online-food-ordering-system/tree/main>

Created a mobile-based food ordering application using React Native Expo, Node.js, Express.js, and MongoDB.

- Implemented features for food browsing, cart management, order placement, delivery selection, and address management.
- Designed RESTful APIs for order processing, payment handling, and order status tracking.
- Managed user authentication and order-related database operations
- Crafted responsive and user-friendly mobile interfaces to enhance user experience

Web-based Voting System for Award Nominations | University Project

GitHub: <https://github.com/kavindugayantha04/Voting-System-For-Award-Nominations>

Developed a web-based voting platform to manage award nominations, voting workflows, and result management.

- Built backend functionalities using Spring Boot.
- Designed a relational database schema in MS SQL Server to efficiently map and maintain data integrity across Events, Categories, Nominees, and Votes.
- Implemented secure user authentication, role-based access control, and voting management features.

Paddy Disease Classifier

GitHub: https://github.com/kavindugayantha04/Paddy_Disease_Classifier-

Developed a CNN-based deep learning model for paddy disease classification using 19,131 labeled leaf images across 10 disease categories, achieving 88.99% test accuracy.

- Trained and evaluated three CNN architectures, selecting the highest-performing model based on classification accuracy and validation performance.
- Applied data augmentation, image preprocessing, and hyperparameter tuning using Keras Tuner (Random Search) to optimize model performance.
- Built a Streamlit web application for real-time disease prediction with confidence score visualization.
- Evaluated model performance using precision, recall, and F1-score metrics on an unseen test dataset of 1,952 images.

Mall Customer Segmentation System

GitHub: https://github.com/kavindugayantha04/Mall_Customers_kmeans

Developed a customer segmentation system using Python, Flask, Scikit-learn, and K-Means clustering to analyze customer behavior and support business decision-making.

- Applied clustering techniques based on age, income, and spending score
- Developed a Flask web application for real-time segment prediction.
- Performed data preprocessing, feature scaling, and generated personalized marketing strategy recommendations.

CERTIFICATIONS

AI/ML Engineer Stage 1, SLIIT — *Dec 2025*

Python Essentials 1, Cisco — *Jan 2026*

JavaScript Essentials 1, Cisco — *Feb 2026*

Python for Beginners, University of Moratuwa — *Jan 2025*

Web Design for Beginners, University of Moratuwa — *Mar 2025*
